INS

(ITALIAN NATIONAL SCHEME)

FOR BIOFUEL

OVERVIEW

The Italian National Scheme (INS) is a set of guidelines and measures established by the Italian government to promote responsible production, trade, and palm oil consumption. An awareness webinar on this topic would likely cover various aspects of the INS, including its goals, benefits, and requirements. The INS is part of the broader European Union (EU) policy on promoting the sustainable production and consumption of biofuels, including palm oil. The EU policy aims to reduce greenhouse gas emissions from transportation while ensuring that biofuels are produced sustainably. The INS specifically addresses concerns related to the environmental impact of palm oil production, such as deforestation and loss of biodiversity.
